Comprehensive and Easy Reading

You cannot go wrong with Hector Garcia-Molina, the author with highest h-index in computer science and Ullman. This book is an easy reading, something uncommon for the books of this genre. It covers a wide variety of topics from relational algebra to E/R modeling, data mining algorithms and SQL; makes a wonderful textbook for graduate studies.

About the Reviewer

Adnan Masood works as a web architect and technical lead for Green Dot Corporation where he develops SOA based middle-tier architectures, distributed systems, and web-applications using Microsoft technologies. He is a Microsoft Certified Trainer holding several technical certifications, including MCPD (Enterprise Developer), MCSD .NET, and SCJP-II. Adnan is attributed and published in print media and on the Web; he is technical editor for "Microsoft Windows Server AppFabric Cookbook" and also taught Windows Communication Foundation (WCF) courses at the University of California at San Diego.

Adnan regularly presents at local code camps and user groups. He is actively involved in the .NET community as cofounder and president of the of San Gabriel Valley .NET Developers group. Adnan holds a Master’s degree in Computer Science; he is currently a doctoral student working towards PhD in Machine Learning; specifically interestingness measures in outliers using Bayesian Belief Networks. He also holds systems architecture certification from MIT and SOA Smarts certification from Carnegie Mellon University.
