

## **James Cannady, Ph.D.**

Graduate School of Computer and Information Sciences  
Nova Southeastern University, Fort Lauderdale, FL 33314

*Phone / Fax* : (954)262-2085/3915

*E-Mail*: [cannady@nova.edu](mailto:cannady@nova.edu)

*URL*: <http://www.scis.nova.edu/~cannady>

### **Home Address**

91 Mountain View Lane, Danielsville, GA 30633

Phone: (706) 335-4116

### **Education**

**Ph.D.** (Computer Information Systems) 2000, Nova Southeastern University.

Thesis Title: *An Adaptive Neural Network Approach to Intrusion Detection and Response.*

Advisor: Professor Sumitra Mukherjee.

**M.S.** (Management Information Systems) 1995, Nova Southeastern University.

**B.S.** (Criminal Justice) 1987, Georgia State University, Atlanta.

### **Academic Experience**

#### **June 2000 to Present, Nova Southeastern University**

*Professor, School of Computer and Information Sciences (July 2010 – Present)*

Served as the GSCIS Center of Academic Excellence representative to NSA

Developed and taught courses at the doctoral and masters level in Computer Science (software engineering and artificial intelligence) and Information Security (Secure System Analysis and Design, Risk Management, and Foundations of Information Security).

Supervised doctoral students in their dissertation work as primary advisor. Served on doctoral dissertation committees for students in GSCIS

*Associate Professor, School of Computer and Information Sciences (July 2004 – July 2010)*

Served as the GSCIS Center of Academic Excellence representative to NSA

Developed and taught courses at the doctoral and masters level in Programming, Artificial Intelligence and Expert Systems, Information Security, Legal and Ethical Aspects of Computing, and Client-Server Computing Systems.

Supervised doctoral students in their dissertation work as primary advisor. Served on doctoral dissertation committees for students in GSCIS.

Institutional Review Board representative (Feb 2001 – Apr 2008).

Led effort to establish NSU as a National Center of Academic Excellence in Information Assurance.

*Assistant Professor, School of Computer and Information Sciences (June 2000 – July 2004)*

Developed and taught courses at the doctoral and masters level in Artificial Intelligence and Expert Systems, Information Security, Legal and Ethical Aspects of Computing, and Client-Server Computing Systems.

Supervised doctoral students in their dissertation work as primary advisor. Served on doctoral dissertation committees for students in GSCIS.

IRB representative.

Primary research has focused on information security issues and artificial intelligence.

**June 2000 to July 2008, University of Georgia.**

*Faculty Fellow/Adjunct Research Scientist*

Provide program guidance and serve as committee member for master's theses in Artificial Intelligence.

Conducted research into the application of neural networks in the detection of network attacks

**April 1999 to December 1999, James Madison University.**

*Adjunct Assistant Professor*

Developed and taught courses at the master's level in Information Security.

**November 1995 to July 2008, Georgia Institute of Technology.**

*Senior Research Scientist (June 2000 – July 2008)*

*Research Scientist II (June 1999 - June 2000)*

*Research Scientist I (November 1995 – June 1999)*

Conducted basic and applied research in information security and artificial intelligence.

Serve as Co-Director of Information Security Center

Supervised graduate students in projects and thesis research.

Served on the Georgia Tech Faculty Senate.

Taught undergraduate and graduate courses in Java and Information Security

### **Research Interests**

My research concerns the intersection between artificial intelligence and information security. In particular I am working to develop new adaptive intelligent systems that can be applied to protect computer systems and networks. These techniques include the use of advanced neural networks in the detection of network-based attacks. I have developed a modified reinforcement-learning algorithm that enhances the effectiveness of the neural networks. My work has also included the use of adaptive self-organizing software agents that are designed to actively protect the computer network from attack. I have been involved in a variety of security-related research projects, including public-key infrastructure interoperability, malicious code detection, and system vulnerability assessments.

### **Teaching Interests**

Information Security, Artificial Intelligence, and Complex Adaptive Systems.

### **Professional Affiliations**

Senior Member, Institute of Electrical and Electronics Engineers (IEEE)

Member, American Association for the Advancement of Science (AAAS)

Member, American Association for Artificial Intelligence (AAAI)

Member, Association for Computing Machinery (ACM)

Member, ACM SIGART -- ACM's special interest group on Artificial Intelligence

Member, IEEE Computer Society

Member, IEEE Computational Intelligence Society

Member, IEEE Systems, Man, and Cybernetics Society

Associate Editor, International Journal of Information Technology and Decision Making (IT&DM)

Referee, IEEE Transactions on Neural Networks and Learning Systems
